agent in exp Screening ent to be tested expression of a for anti-neoplastic agent involves exposing cells to a chemical be tested for anti-neoplastic activity, and determining a change sion of a gene of a signature gene set.

Claim 1; SEQ ID NO 4184; 44pp; English.

The present invention describes a method (M1) for screening for an antiCC neoplastic agent. The method involves exposing cells to a chemical agent
CC to be tested for anti-neoplastic activity, determining a change in
CC expression of at least one gene (I) of a signature gene set, where (I)
CC comprises a sequence (S) selected from 8447 sequences (given in ABL61664
CC to ABL70110), or is at least 95% identical to (S), where a change in
CC expression is indicative of anti-neoplastic activity. (I) has cytostatic
CC activity and can be used in gene therapy. M1 can be used for screening an
CC anti-neoplastic agent, and can be used for producing a product which is
CC the data collected with respect to the anti-neoplastic agent as a result
CC of M1, and the data is sufficient to convey the chemical structure and/or
CC properties of the agent. M1 can be used in the treatment of cancer such
CC as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney,
CC prostate or pancreatic cancer, adenocarcinoma, carcinoma, clear cell
CC cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous
CC et all carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's

                                                                                                                  Alignment :
Pred. No.:
                                                                                                                                                                                                                               agent; treating cancer; monitoring the progress of cancer therapy in a patient; determining the likelihood of success of cancer therapy in a patient; producing test data with respect to the anti-neoplastic activity of a compound; and determining the progress of a treatment for cancer in a patient following commencement of a cancer treatment on the patient. The methods and compositions of the invention have cyrostatic activity and may be used in gene therapy. The method is useful in diagnosing or treating cancer in a mammal. This polynucleotide sequence represents a gene over-expressed in a cancerous cell, used in the novel cancer
                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a novel method for diagnosing cancer in a mammal. The method comprises determining amplification of specific genes, given in the specification, in the genome of a mammal. The invention further comprises methods for: diagnosing cancer or a pre-cancerous condition in a mammal; inhibiting cancer or a pre-cancerous condition in a mammal; identifying an agent having therapeutic activity in a human patient; identifying an anti-neoplastic agent; determining the cancerous status of a cell; identifying a compound as an anti-neoplastic
                                                                                                                                                                                                             gene over-expressed in a cancerous diagnosis method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Diagnosing cancer in a mammal comprises determining amplification specific genes, e.g., serine/threonine kinase 6, in the genome of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WPI; 2004-784489/77.

Claim 3; SEQ ID NO 88; 92pp; English

condition in a mammal; inhibiting cancer or a pre-cancerous condition in a characteristic activity in a characteristic activity in a characteristic activity in a characteristic activity in a characteristic activity in a characteristic activity in a characteristic activity in a cancerous status of a cell; identifying a compound as an anti-neoplastic agent; treating cancer; monitoring the progress of cancer therapy in a patient; determining the likelihood of success of cancer therapy in a patient; producing test data with respect to the anti-neoplastic activity of a compound; and determining the progress of a treatment for cancer in a patient following commencement of a cancer treatment on the patient. The methods and compositions of the invention have cytostatic activity cand may be used in gene therapy. The method is useful in diagnosing or treating cancer in a mammal. This polymucleotide sequence represents a concerous cell, used in the novel cancer concerts a matching cancer in a cancerous cell, used in the novel cancer concerts. The invention relates to a novel method for diagnosing cancer in a mammal. The method comprises determining amplification of specific grant in the specification, in the genome of a mammal. The invention further comprises methods for: diagnosing cancer or a pre-cancerous genes

                                                                                                                                                                                     condition in a mammal; inhibiting cancer or a pre-cancerous condition in a mammal; inhibiting cancer or a pre-cancerous condition in a mammalian cell; identifying an agent having therapeutic activity in a human patient; identifying an anti-neoplastic agent; determining the cancerous status of a cell; identifying a compound as an anti-neoplastic agent; treating cancer; monitoring the progress of cancer therapy in a patient; producing the test data with respect to the anti-neoplastic activity of a compound; and determining the progress of cancer therapy in a patient; producing commencement of a cancer treatment for cancer in a patient following commencement of a cancer treatment on the patient. The methods and compositions of the invention have cytostatic activity and may be used in gene therapy. The method is useful in diagnosing or treating cancer in a mammal. This polynucleotide sequence represents a gene over-expressed in a cancerous cell, used in the novel cancer
                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a novel method for diagnosing cancer in a mammal. The method comprises determining amplification of specific genes, given in the specification, in the genome of a mammal. The invention further comprises methods for: diagnosing cancer or a pre-cancerous
                                                                                                                                                               Sequence 2600

                                                                                                                                                                                  Alignment
                                                                                                                                                                                                                                                                                                  The invention relates to a novel method for diagnosing cancer in a commandant. The method comprises determining amplification of specific genes, companies and the specific genes of the specific genes of the specific genes of the specific genes of the specific genes of the specific genes of the specific genes of the specific genes of the specific genes of the specific genes of the specific genes of the specific genes of the specific genes of condition in a mammal; inhibiting cancer or a pre-cancerous condition in commendation of the specific genes of cancerous condition in a mammal patient; identifying an agent having therapeutic activity in a compound patient; denerifying an anti-neoplastic gene; determining the call; identifying a compound as an anti-neoplastic compatient; determining the likelihood of success of cancer therapy in a compound; and determining the progress of cancer therapy in a compound; and determining the progress of a treatment for cancer in a patient following commencement of a cancer treatment on the patient. CC of a compound; and determining the progress of a treatment for cancer in a patient following commencement of a cancer treatment on the patient. CC and may be used in gene therapy. The method is useful in diagnosing or treating cancer in a mammal. This polynucleotide sequence represents a CC diagnosis method of the invention.
                                                                                                                                                  No.:
                                                                                                                                                                                                                                               Sequence 2600
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Diagnosing cancer in a mammal comprises determining amplification specific genes, e.g., serine/threonine kinase 6, in the genome of

                                                                                                                                                                                                                                                The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of the gene in both soft tissue samples and comparing the expression in the first soft tissue sample indicates the presence of soft tissue sarcoma. The method of the invention has cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated DNA of the invention. The current sequence is not shown within the specification per se but was submitted in CD format by the inventor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Early detection of soft tissue sarcoma comprises determining expression of a gene in a first soft tissue sample and a normal soft tissue sample and comparing the gene expression, also useful in treating soft tissue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Boft

STAT6-activating proteins and encoded genes, applicable in diagnosis and developing drugs to treat allergic diseases, inflammations, autoimmune diseases, diabetes, hyperlipidemia, infections e.g. HIV, a WPI; 2003-140442/13. P-PSDB; ADG10642. 25-MAY-2001; 2001JP-00157043. 30-AUG-2001; 2001JP-00260681. 10-OCT-2001; 2001JP-00313175. Honda (ASAH) ASAHI KASEI KOGYO KK Matsuda Þ Muramatsu

Claim 4; SEQ ID NO 231; 2080pp; Japanese

and õ

The invention relates to 242 human STAT6-activating proteins and cDNAs care encoding them (ADG10411-ADG10894) and to sequences with 95% or more combined to the STAT6-activating proteins and their encoding nucleic acids. The invention also relates to recombinant vectors and host cells comprising a STAT6-activating protein-encoding nucleic acid; the comparising a STAT6-activating protein; antisense oligonucleotides and specific for a STAT6-activating protein; antisense oligonucleotides and proteins of screening for activators or inhibitors of STAT6-activating protein; comethods of screening for activators or inhibitors of STAT6-activating protein; compositions comprising a modulator of STAT6-activating protein; compositions comprising a modulator of STAT6-activating proteins; compositions comprising a modulator of STAT6-activating proteins; compositions comprising a modulator of STAT6-activating proteins; compositions of treating patients by administration of the drug compositions. The STAT6-activating proteins, concleic acids encoding them, and modulators of their activity or compositions controlled to the diagnosis and treatment of allergic cancer, infections (e.g., HIV), cancer and disorders associated with Th1 composition. The present sequence is related to the invention.

                                            The invention relates to a method for detecting a lung cancer-associated transcript in a cell from a patient, comprising contacting a biological seample from the patient with a polynucleotide that selectively hybridises to a sequence that is at least 80 % identical to a gene that exhibits increased or decreased expression in lung cancer samples. Lung cancer-associated polynucleotides and polypeptides are used for identifying a compound that modulates a lung cancer-associated polypeptide, for cancer inhibiting proliferation of a lung cancer-associated cell to treat lung cancer in a patient and for treating a mammal having lung cancer by administering a modulatory compound identified. The methods are useful for treating lung cancer, such as small cell lung cancer, non-small cell lung cancer or other benign or precancerous lesions, e.g. atelectasis, cemphysema, bronchitis, chronic obstructive pulmonary disease, fibrosis, hypersensitivity pneumonitis, interstitial pulmonary fibrosis, asthma and bronchicatesis. The genes, polynucleotides and polypeptides are useful for diagnostic purposes and as targets for screening for therapeutic compounds that modulate lung cancer, such as antibodies. Sequences hax7612-ABX76474 represent lung cancer-associated polynucleotides of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                09-NOV-2001;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                             . No.:
                                                                                                                                                                                                                                                   The invention relates to an inhibitory RNA (RNAi) molecule derived from a nucleic acid molecule comprising a defined nucleic acid sequences given in the specification or a sequence which hybridizes to the sequences and encodes a Notch signaling target gene or which is a degenerate as a result of the genetic code of the sequences. The methods and compositions of the present invention are useful for manipulating the phenotype of stem cells, preferably pluripotent stem cells. This sequence corresponds to one of the nucleic acid molecules of the invention.
                                                                                                                                                                                                        Sequence 2576
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New inhibitory RNA molecule for manipulating the phenoty stem cells.

29-NOV-2001;
03-DEC-2001;
The invention relates to nucleic acids and proteins (ADN38683-ADN40064) whose expression is upregulated or downregulated in specific cancers or other diseases such as angiogenic or fibrotic disorders, and to methods of determining the presence or absence of a pathological cell in a patient by detecting a nucleic acid at least 80% identical to those of the invention or by detecting a polypeptide of the invention. The invention also relates to expression vectors and host cells comprising a nucleic acid of the invention; antibodies which specifically bind a polypeptide of the invention; use of such antibodies for drug targeting,
                                                                                                                                                                                                                                                                                                                                                 Afar
Mack
                                                                                                                                                                                                                    Determining the presence or absence of a pathological useful for diagnosing, prognosing or treating cancer, a nucleic acid in a biological sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Homo

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              and methods of screening for modulators or activity polypeptides and nucleic acids. The nucleic acids, polypeptides, antibodies and methods are useful for diagnosing, prognosing and treat cancer and other conditions such as psoriasis, ischaemia, heart disease atherosclerosis, inflammatory diseases, autoimmune diseases, retinal neovascularistaion syndromes, scarring and uterine fibroids. They may also be useful in wound healing and in contraception. The present segmence represents a nucleic acid sequence of the invention.

Classifying a breast cancer patient according to prognosis comprises determining the similarity between the level of expression of each of the genes in a cell sample taken from patient, to control levels. Ġ,

Disclosure; SEQ ID NO 1043; 226pp; English

The invention relates to a method of classifying a breast cancer patient according to prognosis by determining the similarity between the level of expression of each of five genes for which markers are listed in the specification, in a cell sample taken from the breast cancer patient to control levels of expression for each respective five genes to obtain a patient similarity value. The methods are useful for classifying a breast cancer patient according to prognosis. Kits and computer program products are useful for data analysis using the diagnostic, prognostic and statistical methods of the invention. This sequence corresponds to a marker used in the method of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
This invention relates to a novel human diaphanous-3 (DIAPH3) protein and CC the encoding polynucleotide thereof. Specifically, it refers to the use CC of DIAPH3 cDNA in the prognosis of breast cancer, such that the DIAPH3 CC protein can be used as a target for anti-cancer drugs or for the CC identification of molecules with anti-cancer activity. The present CC invention provides antibodies that specifically bind to the DIAPH3 CC protein, as well as methods to identify an agent that modulates the CC binding of DIAPH3 to a binding partner. In particular it describes CC measuring the expression level of DIAPH3 using hybridization oligos and CC comparing this with a control expression level, where a raised expression level indicates a poor prognosis with respect to breast cancer. As such, CC it also provides small interfering RNA oligos that can hybridize to the CC concer and inhibit expression thereof. The peptide and nucleic acid Sequences of this invention are useful as markers to differentiate CC patients with a good prognosis from those with poor prognosis for breast CC cancer and are useful as targets for screening assays designed to concer and are useful as targets for breast cancer. Accordingly, which in turn are used for treating breast cancer. Accordingly, they can be used in gene therapy and exhibit cytostatic activity. This polynucleotide sequence is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New purified diaphanous-3 (DIAPH3) peptides and nucleic acids, targets for screening assays designed to identify inhibitors on modulators of DIAPH3 activity, which are useful for treating by

The invention relates to an agent for the prophylaxis and therapy of cancer comprising a compound which inhibits the activity or expression channes EZH2 (enhancer of zeste homonlogue 2), resulting in apoptosis. The EZH2 inhibitors include anti-EZH2 antibodies and EZH2 antisense nucleic acids. The invention also relates to a kit for screening for inhibitors

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       of EZH2 activity or expression. EZH2 is a component of a complex with histone methyltransferase activity which methylates histone H3 on lysine residues at position 9 and/or 27. It has been found to be deregulated in various tumours, and acts as a mediator of tumorigenesis, being able to reverse repression of cyclin A which in turn mediates cell cycle advancement. The agent of the invention can be used for preventing, treating and diagnosing cancers such as colorectal cancer, breast cancer, lung cancer, pancreatic cancer and ovarian cancer, and can also be used in drug screening. The agent of the invention is safe and less toxic than prior art cancer prophylactic/therapeutic agents. The present sequence represents DNA encoding human EZH2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 2253

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an agent for the prophylaxis and therapy of CC cancer comprising a compound which inhibits the activity or expression of CC human EZH2 (enhancer of zeste homologue 2), resulting in apoptosis. The CC thuman EZH2 (enhancer of zeste homologue 2) resulting in apoptosis. The CC inhibitors include anti-RZH2 antibodies and EZH2 antisense nucleic CC acids. The invention also relates to a kit for screening for inhibitors CC fistone methyltransferase activity which methylates histone H3 on lysine CC residues at position 9 and/or 27. It has been found to be deregulated in CC various tumours, and acts as a mediator of tumorigenesis, being able to CC reverse repression of cyclin A which in turn mediates cell cycle advancement. The agent of the invention can be used for preventing, CC treating and diagnosing cancers such as colorectal cancer, breast cancer, CL lung screening. The agent of the invention is safe and less toxic than prior art cancer prophylactic/therapeutic agents. The present sequence conventions and a DNA encoding human EZH2 which was used in an example of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence
                                                                                                                                                               647

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
